

Global Digital Currency Exchange & Sharing Trading Platform

[DOWNLOAD WHITEPAPER](#)

KTrade Global Digital Currency Trading Platform was officially launched in November 2017. Since then, our comprehensive fin-tech blockchain technology application team has devoted into providing our users the most stable, secure and convenient trading environment. With the above mentioned core value and commitment, the system upgrade this time aims to bring more benefits to **1) community operation and 2) system security.**

Due to the above mentioned two points, the platform has officially changed its name to KTrade Global Digital Currency Exchange & Sharing Trading Platform, and has reduced the trading fee from 0.2% to 0.1%. The whole new platform includes the following six major technologies: **1) distributed blockchain, 2) high-speed server node application, 3) professional asset wallet, 4) community sharing mechanism, 5) innovative and diversified applications and 6) immediate customer service,** hoping to strengthen customer information and asset security level while at the same time offer the fastest withdrawing capability among trading exchange institutes in Taiwan.

KTrade Community Operation Mechanism

Platform income allocation (Trading fee profit distribution mechanism)

- ▶ First in the market to have trading fee 100% rewarded back to KT holders under the following distribution principle
- ▶ Distribution according to income, proportionally distributed from time to time
- ▶ For example, if trading fee income cover BTC, ETH, XRP, NULS, etc., then the currency distributed will also include BTC, ETH, XRP, NULS, etc.

1. Income distribution is based on cycles

i

The first week of allocation only has 5 days, from July 11th 2018 (00:00, GMT+8) to July 15th 2018 (23:59, GMT+8). The first profit allocation date will be July 16th 2018 (00:00, GMT+8).

ii

For then onwards, each allocation cycle will be 7 days, where Mondays are allocation days under usual circumstances. The second cycle will be from July 16th 2018 (00:00, GMT+8) to July 22nd 2018 (23:59, GMT+8). The second allocation date will be July 23rd 2018 (00:00, GMT+8).

2. KT holding calculation

For those who wish to be rewarded with profit, they will need to hold the KT amount for more than 24hrs before the profit allocation date is due (which should be up to 23:59 every Saturday). The total amount they hold will be seen as the holding total for that allocation cycle, and holding proportion will be calculated accordingly where the trading fee profit of that cycle will be allocated as one-off payment at 00:00 of the allocation date.

Right to Vote in KTrade Decision Making Processes

Furthermore, each KT holder is given the right to participate in all the free coin launch voting activities held by KTrade. Moreover, users who hold more than 1% of the KT total distributed amount are permitted the right to nominate. The digital currency that gained most votes after the voting activity is closed will be open on KTrade for users to trade, every 10,000 KT is equivalent to one vote, so 100,000 KTs equal to 10 votes, and so on forth. For actual execution of the process and details please refer to **KTrade Community Free Votes of Currency Launch Details.**

KTrade System Security Level Upgrade

Exclusive server technology of BaaSinfra: decentralized cloud server

BaaSinfra combined the most up-to-date blockchain concepts, allowing KTrade trading platform to be equipped with the most comprehensive data decentralization technology and security protection mechanism.

BaaSinfra has modified the infrastructure between server hardware and software operation, where server efficiency and communication speed has elevated. By using Q.N. and S.N, fixed floating IP management system was introduced to the node server end, the traditional way of managing servers have been tremendously upgraded, ameliorating the level of difficulty for hackers to attack the servers. Furthermore, BaaSinfra provides immediate check and verification on customer traffic packages, so that abnormal packages can be blocked when entering the system. Along with decentralized nodes that are dispersed separately, even if malicious attackers invaded, they will not be able to obtain the location of the node servers. Finally, in rare occasions where data has been maliciously edited, through verification mechanism of other nodes, damaged data can be restored.

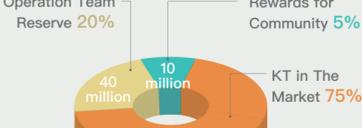

What is KT ?

KT is the digital currency right in adaptation to the trading platform's system upgrade and transformation. It provides holders the mechanism to share profit and operate together, replacing the original KCOIN business model. KT holders can enjoy the platform profit distributed reward, and holds the right to participate in all free coin launch voting activities on KTrade. 10,000 KT is equivalent to one vote, and once the KT holder holds more than 1% of the total KT distributed, he/she will be given the right to nominate the vote.

KT Total Distribution and Allocation Mechanism

The total amount of the KT reissuing this time is 2 billions, with which 1.5 billions will be exchanged with the KCOIN in the market; 0.4 billion will be kept with the team for future regular activities and operational use. The remaining 0.1 billion will go to the fund for community incentives to attract new users to join the platform and to promote the community's mining mechanism.

KT Community Operation Rewards (Mining Mechanism)

- KTrade will release 10 million KT as the fund to encourage users establish communities
- The daily limited amount of 10,000 KT as mining mechanism reward
- Each invitation code represents a community group
- The leader of the community (the owner of the invitation code) will be awarded KTs accordingly

Allocation Algorithm

$$\frac{\text{total trading amount of individual communities}}{\text{KTrade total trading amount}} \times 10,000$$

Timeline

2017

Platform preparation stage
Market research, team building

Launch platform development project
Trading platform development project started

2018

The platform is online and the project is signed

- Held the blockchain symposium
- Signing a service project to promote development

Brand building, platform function upgrade

- Joined Asia Pacific Blockchain Development Association, Taiwan SRO Self-Regulatory Organization

• 2018 Computex InnoVEX Exhibition

- Increase TWDT-ETH transaction, transaction fee distribution, community mining reward mechanism

Q3

Q2

Q4

Q1

Q1

Q2

Q3

Q4

Q3

Platform upgrade
Platform security and function reinforcement plan

Brand remarketing

- Handling large blockchain activities
- Expand the scope of business services

2019

Completed project service performance
Complete the progress of the project signed in 2018

New platform marketing and cooperation strategy

- Partner alliance international press conference
- Handling lectures
- Co-sponsored the Blockchain Application and Development Institute with the National Chamber of Commerce

Partners

CoolBitX Technology
